

Southern Cross Finder

South East Queensland Version

Instructions

1. On the base (next page), cut along the thin curved horizontal line so that you have made a slit. This is where you will insert part of the star disc.
2. Cut out the star disc (see below).
3. Make a small hole in both the star disc and the base where the small crosses are marked.
4. Attach the star disc to the base using a split pin (or a paper clip) so that it spins freely.
5. Once the star disc is attached, insert the lower part of the star disc into the slit you have made.
6. Turn the wheel until the time and date match the current date and time.
7. Turn to face South and hold the finder up in front of you. Use the finder to locate the Southern Cross and the Pointer Stars (or Alpha and Beta Centauri).
